XL SOLID MACHINE DETERGENT

CONVENIENT FUNCTIONALITY

Avance XL™ Solid Machine Detergent is a solid, high-alkaline detergent designed to remove tough food soils in both high temperature and low temperature dish machines. This highly concentrated formula reduces product change-over and contains low-foaming surfactants and chelating agents to assure one-pass cleaning without spots or streaks. Its unique packaging prevents spills and greatly improves employee safety by minimizing the likelihood of incidental contact.

DIRECTIONS:

Remove lid from container and turn off power to the dish machine. Invert jar, placing it onto State's solid dispenser. Concentration should be set and periodically monitored using an alkalinity titration kit, with adjustments to the set-point made via the controller. Ideal titration for medium soil is 200 ppm.

Best results are obtained when the wash tank temperature is between 145 – 155°F. If water temperatures are too low, fat soils will not be softened or solubilized, hindering cleaning efficiency. Do not use on aluminum, silver plating or pewter, as damage the alkaline nature of the product may cause damage.

TECHNICAL DATA:
APPEARANCE: off-white solid
RINSABILITY: excellent
pH (1% SOLUTION): 12.3 – 13.3
ODOR: none
WEIGHT: 8 lbs per capsule
